

RUNHAN HUANG

Harvard University

rhuang@fas.harvard.edu <https://hrh6666.github.io/>

EDUCATION

Harvard University, John A. Paulson School of Engineering and Applied Sciences

Aug 2026 - Now

Ph.D. in Computer Science

Cambridge, MA

Tsinghua University, Yao Class

September 2022 - June 2026

B.Eng. in Computer Science (GPA: 3.9 / 4.0)

Beijing

EXPERIENCE

MARS Lab, IIIS & Shanghai Qizhi Institute

June 2024 – March 2025

Research Assistant

Beijing

- Advised by **Prof. Hang Zhao**, working on *Robot Locomotion* and *Robot Manipulation*

Du Lab, Kempner Institute, Harvard University

March 2025 – September 2025

Visiting Researcher

MA, USA

- Advised by **Prof. Yilun Du**, working on *Diffusion Planning*

PUBLICATIONS

- [P8] Zhangchen Ye*, Enxuan Ruan*, Yifei Bao*, **Runhan Huang**, Jiankun Yang, Jiakang Jin, Yixiao Huo, Pengyuan Wang, Yinan Han, Huaxing Huang, Wenhao Cui, Yiming Li†, Xiaoyu Tian†. “*SkillX: Unified Multi-Skill Policy Learning for Humanoid Soccer*,” *CoRL*, 2026.

RESEARCH EXPERIENCE

Generative Control as Optimization | *ICLR Workshops 2026*

- Reinterpret flow-matching inference from fixed-schedule integration to iterative optimization by learning a time-unconditional, stationary velocity field
- Introduce an adaptive inference mechanism that dynamically allocates computation for contact-rich bottlenecks, alongside a training-free OOD anomaly detector using the vector field norm
- Scale the framework to π_0 -series VLA models and demonstrate superior sample efficiency and real-world robustness on a Galaxea R1 Lite humanoid robot for high-precision tasks

TTT-Parkour: Rapid Test-Time Training for Perceptive Robot Parkour | *CoRL 2026*

- Develop a real-to-sim-to-real framework that rapidly adapts humanoid locomotion policies to unseen and highly challenging terrain geometries through test-time training

- Build an efficient RGB-D geometry reconstruction pipeline and fine-tune a pretrained locomotion policy on high-fidelity terrain meshes in under 10 minutes
- Demonstrate robust zero-shot sim-to-real transfer across wedges, stakes, boxes, trapezoids, narrow beams, and mixed-terrain parkour courses

Flexible Locomotion Learning with Diffusion Model Predictive Control | ICRA 2026

- Reinterpret diffusion models as generative priors for MPC, using reward updates, constraint projection, and candidate ranking
- Introduce a reward-weighted denoising method to finetune the diffusion planner, improving locomotion performance
- Develop real-time diffusion planning techniques such as asynchronous execution and early caching; demonstrate zero-shot transfer on a Unitree Go2 quadruped

MoELoco: Mixture of Experts for Multitask Locomotion | IROS 2025

- Develop a multitask locomotion framework using a mixture-of-experts (MoE) architecture.
- Enhance sample efficiency and skill compositionality for reinforcement learning across multiple locomotion tasks.
- Project leader; contributed to model design, training infrastructure, evaluation and real-world deployment.

VR-Robo: A Real-to-Sim-to-Real Framework for Visual Robot Navigation and Locomotion | RA-L 2025

- Build a digital-twin simulation pipeline using 3D Gaussian Splatting for photo-realistic rendering.
- Propose an RGB-based sim-to-real transfer policy framework for navigation and locomotion.
- Participate in low-level locomotion training and real world experiment

Robust Robot Walker: Learning Agile Locomotion over Tiny Traps | ICRA 2025

- Design a proprioception-only locomotion policy that generalizes to terrains with small obstacles ("tiny traps").
- Introduce a two-stage reinforcement learning training framework and a novel benchmark for tiny-trap traversal.
- Co-lead benchmark design, policy training, evaluation and real-robot deployment.

PROJECTS

Implicitly Exploit the Modularity in Multimodal Large Language Models | Multimodal Machine Learning Course Project

- Propose a new gradient update strategy for visual instruction tuning
- Train a LVLM based on phi-2 model, achieving good performance

Humanoid Perceptive Locomotion | Intelligent System and Robotics Course Project

- Construct a two-stage teacher-student locomotion learning paradigm with PPO and DAgger, enabling a humanoid robot to traverse challenging terrain
- Demonstrate robust stair, slope, and gap traversal in simulation using only depth image and proprioception

Multi-agent Navigation with Vision Language Model | Practical Research Training Project

- Build a city-scale multi-agent navigation dataset combining Google Street View, autonomous driving data, and 3D Gaussian Splatting reconstructions, enriched with landmark, orientation, and action annotations to directly supervise spatial reasoning skills.
- Design a dual benchmarking protocol spanning static VQA-style prediction and 3DGS-based simulation, providing a comprehensive assessment of perception, planning, and coordination
- Benchmark the state-of-the-art VLMs, showing that current models fall significantly short, motivating new research on embodied multi-agent intelligence

SKILLS

Programming: C, C++, Python, Pytorch, ROS, ROS2, Typescript, Scala

Robotics related software/hardware experience: isaacgym, Unitree A1, Unitree Go2, Unitree G1, Galaxea R1 Lite Mobile Manipulator, PiperX Robot Arm, Franka

Key Course Taken: C/C++ Programming (A+), Calculus (A), Linear Algebra (A), General Physics (A+), Algebra and Computation (A+), Algorithm Design, Probability and Statistic, Machine Learning, Deep Learning, Multimodal Machine Learning (A+), Computer Vision (A), Theoretical Computer Science, Reinforcement Learning, Autonomous Driving (A+), Advanced Computer Graphics (A), Practical Research Training (A)

EXTRACURRICULAR EXPERIENCE

IIIS Soccer Team

Jan 2024 – Feb 2025

Captain

Beijing

- Led a soccer team and managed the soccer club of IIIS.
